

Joseph Le

Palo Alto, CA – josephle@stanford.edu – github.com/JosephLeKH – josephle.dev

EDUCATION

Stanford University

Palo Alto, CA

Bachelor of Science in Computer Science (Systems and AI Track), GPA: 3.95/4.0

June 2027

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Systems, Artificial Intelligence, Machine Learning, Databases, Natural Language Processing, Linear Algebra
- Leadership & Activities: VP, CS + Social Good; Teaching Assistant, CS 106B; Stanford AI Club

WORK EXPERIENCE

Software Engineering Intern

Cupertino, CA

Apple

Jun 2026 - Present

- Building a modular, scalable Swift iOS application for Apple's internal event platform, architecting flexible component systems to support diverse event types and large-scale internal audiences across the organization.

Software Engineering Intern

Palo Alto, CA

Vimes

Feb 2026 - Present

- Architected and deployed a registry database with optimized indexing for fast search and built native law enforcement system integrations enabling officers to access, search, and auto-fill forms with live records.
- Engineered an AI-powered backend form completion system with context-aware LLM optimization and prompt engineering, reducing token usage while improving suggestion accuracy and data security.
- Built a modular notification orchestration system from scratch enabling administrators to configure dynamic alert routing across channels and recipient types with role-based access control over information flow.

Software Engineer

Palo Alto, CA

Stanford Carta Lab

Dec 2025 – Present

- Built core planning features for Stanford's four-year course planner, implementing interactive scheduling workflows, prerequisite and unit constraint validation, and robust client-server state synchronization across complex multi-quarter plans.
- Identified and resolved 20+ frontend state and edge-case bugs, improving UI consistency and reducing student-reported planning errors in a high-traffic production environment.

Founding Engineer

Palo Alto, CA

Bases Insight

Aug 2025 - Mar 2026

- Architected and built a production financial markets analysis platform powering automated valuation workflows (DCF, comps, three-statement modeling) with a low-latency FastAPI backend, React frontend, and PostgreSQL database.
- Designed distributed async processing pipelines for document extraction and validation, improving model generation throughput and system scalability.
- Implemented CI/CD pipelines with GitHub Actions and automated testing, reducing friction and increasing release reliability.

Data Science Intern

Austin, TX

Bonterra

Jun 2025 - Aug 2025

- Developed predictive models using scikit-learn, XGBoost, and CausalML to estimate treatment effects across 2.7M+ records.
- Designed and optimized large ETL pipelines with SQL, Pandas, and NumPy for feature engineering, model training, and evaluation.

TECHNICAL PROJECTS

GrantMate: Grant Writing Assistant — FastAPI, React, TypeScript, RAG, Gemini, NumPy

- Developed a full-stack retrieval-augmented generation (RAG) system for Project Homeless Connect, implementing vector search, semantic retrieval, and source attribution to improve generation accuracy and reduce hallucinated outputs.

Wildfire Insurance Analysis — Python, Pandas, SQL, Regression

- Built end-to-end data pipelines and regression models to analyze California wildfire severity (2016–2023), applying time-series analysis and statistical modeling to quantify insurance non-renewal trends and FAIR Plan dependence.

TECHNICAL SKILLS

Languages: Python, Java, C++, C, Swift, JavaScript, TypeScript, SQL, Go, Bash

Frameworks & APIs: React, React Native, Node.js, Express, Spring, FastAPI, Flask, REST APIs, GraphQL

Databases & Storage: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, Database Design, Query Optimization

Systems & Cloud: AWS (EC2, S3, Lambda, IAM), Docker, Kubernetes, Microservices, Distributed Systems, Low-Latency Systems, Network Programming, Scalability, Load Balancing, Caching, CI/CD, GitHub Actions, Unix/Linux, Networking, Containerization

Machine Learning: PyTorch, TensorFlow, scikit-learn, XGBoost, HuggingFace Transformers, Pandas, NumPy, NLP, LLM Integration
